

MatrixCare Point of Sale

Seamlessly track POS purchases with our fully integrated solution

To stay financially healthy, you need to capture every dollar from ancillary point-of-sale purchases in your community. Integrating your POS and EHR solutions can be key to achieving that goal.

MatrixCare Point of Sale integrates with your LPC's EHR and billing for a fully connected POS billing system that seamlessly tracks resident charges across the whole community. This means you can capture missed revenue, deliver data on purchasing decisions and trends, help staff work more efficiently, and attract new residents with our easy-to-use, convenient solution.

Convenience and transparency support independence for your residents

Give your residents full access to and control over accounts, including meal plan balances and other room charges, with our all-in-one solution. Your residents can feel independent, yet supported, with our POS solution.

- > Resident portal includes features that allow residents to order food in advance for pickup or in-room delivery.
- > An easy-to-use interface lets residents and family members check accounts or past transactions, and reload funds to accounts.
- > Options can be enabled for Google Pay, Apple Pay or other credit card methods for even more versatility.

Smart technology streamlines operations so staff can focus on residents

Minimize data entry and streamline back-office processes while ensuring you have the POS technology you need as your organization grows.

- > A single set of resident profiles means there's no need to enter information into multiple systems.
- > Transaction charges are accumulated monthly and sent to your billing application.
- > Compliance with ODBC and SQL standards means third-party systems can easily integrate with MatrixCare POS.

Access to data for business insights

Integrating MatrixCare POS with your EHR helps ensure information easily flows between various systems so you can capture ancillary charges for resident services and improve your return on investment.

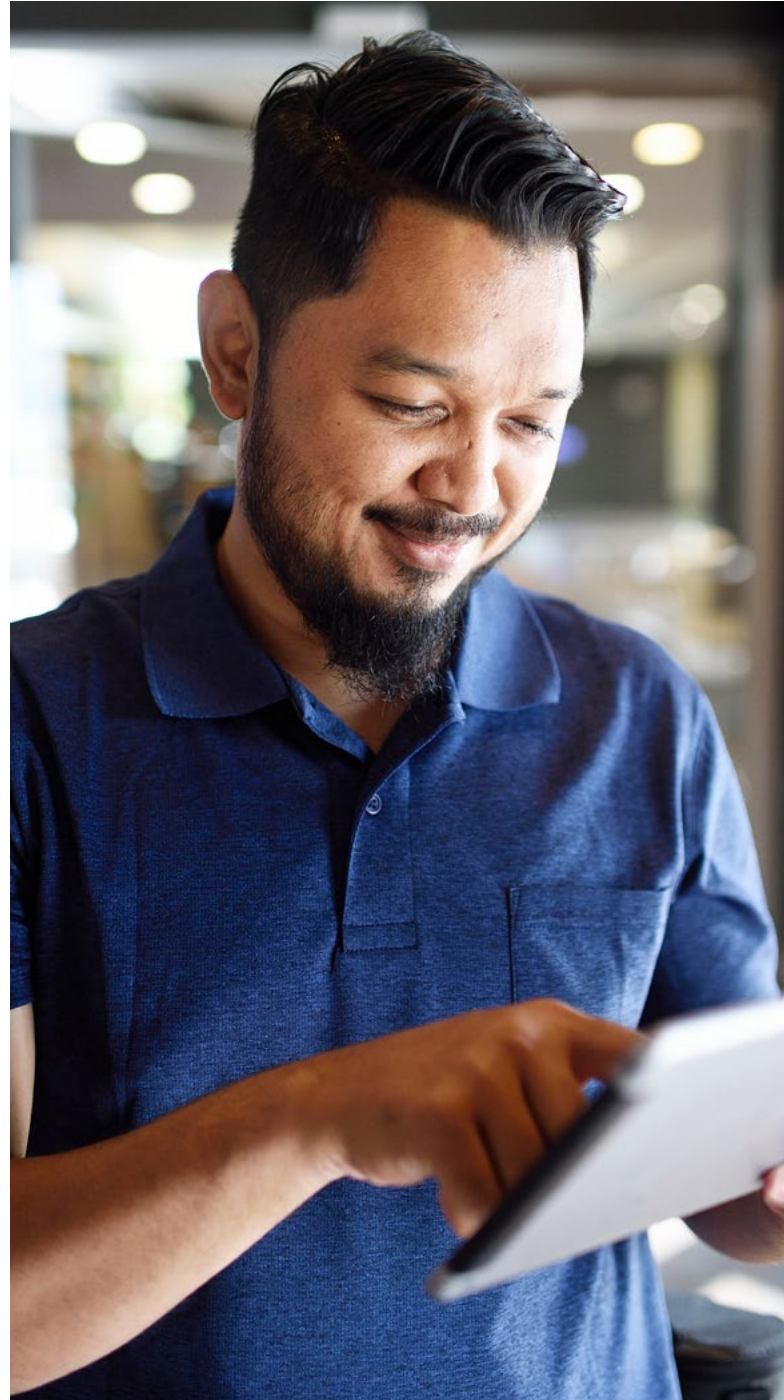

- > Add-on products include a resident portal, analytics modules and integrations with partners such as TouchTown, Caremerge and K4Connect for a seamless community experience.
- > Track data to understand frequency of resident dining, preferred menu items, average meal spend and more for better business insights.
- > Analytics dashboards display clean, accurate data that can be delivered in an automated email report.

Integrate POS with dining services

Our POS solution is fully integrated with MealTracker to give you comprehensive dining service management. The combination of MealTracker and our POS means you can:

- > Share menus, kitchen production details and reporting across your organization's care settings.
- > Develop menus in MealTracker that include recipe, allergen and nutritional information, and share those menu details with any location that also uses your POS.
- > Improve staff efficiency with reduced manual entries when you populate menu items in the POS.
- > Evaluate menu costs before displaying purchase options.
