

No internet? No problem.

We've got you covered with offline documentation

For some rural home health and hospice agencies, poor internet connections can lead to lost documentation, re-work and caregiver burnout. But now, completing documentation doesn't have to rely on internet access.

MatrixCare's offline EHR capabilities allow your team to reliably document patient care anytime, anywhere.

With offline documentation, you'll have:

- > Real-time documentation: Capture patient data instantly, even without an internet connection
- > Seamless synching: Data updates automatically when a device reconnects to the internet
- > Faster billing and compliance: You can reduce errors and streamline claims processing
- > Electronic signature capture: Time-stamped approvals help ensure compliance
- > Less administrative burden: Caregivers can focus on patient care instead of paper documentation

How it works

1

Clinicians document care on their hand-held device in real time, even without an internet connection

2

Data is securely stored and encrypted on the clinician's device

3

When the device reconnects to the internet, all documentation automatically syncs

4

Supervisors receive up-to-date reports for compliance and billing

MatrixCare is trusted by leading home health and hospice agencies:

- > Designed for rural and remote care environments
- > Helps reduce caregiver burnout and improve retention
- > Easily scales with your agency as it grows
- > Robust training and implementation process

By eliminating the stress of lost documentation, MatrixCare helps rural providers focus on what really matters: delivering high quality, patient-centered care.
